Strategic Leadership across Telecom Access and Cloud NW Systems Engineering

As a Telecom Wireless Access & Cloud Network Systems Architect, I've leveraged my expertise in telecom Hardware and cloud systems to deliver significant cost and optimization benefits to a diverse range of clients and operators. To my credit, I have conceptualized, designed, POC and manufacturing expertise of high volume in access products and broad cross-functional experience across major international markets.

ABRIDGEMENT

A passionate leader in telecom and wireless cloud network systems design, with extensive experience across various organizations, cultures, roles, and geographic locations. I have successfully established diverse wireless development verticals from 2G through to 5G, translating business goals into technical objectives. Staying updated on the latest technologies, I drive new concepts, fostering close coordination among cross-functional teams across different time zones. I excel in building and maintaining relationships with customers, vendors, and OEMs, turning R&D development into large-volume production. I effectively manage budget planning and ensure the successful execution of development activities within budget constraints. I lead the implementation of annual plans and goals, consistently achieving growth and outperforming key competitors and industry norms.

SIGNATURE SKILLS, TECHNICAL ACUMEN, & INNOVATION

Actionable Steps to Drive Vision: With a strategy-driven approach, I specialize in the competitive conceptualization and implementation of wireless product design & development, inclusive of RRU, DUs and CU for cloud platforms. **XRAN/O-RAN** systems architecture. My expertise spans RRU FDD and TDD LTE 4G/5G ORAN systems designs, access DU, CU cloud technologies, end-to-end RRU and vDU development, and new NW architecture implementation. I have a proven track record in volume manufacturing and field deployment of radios and cloud servers for DU/CU, product certifications, lab testing, and procurement support. My skills also include ORAN NW system **design for field deployment** scenarios, radio network optimization, dimensioning, and end-to-end IOT system testing for **4G&5G**. I have consistently expanded market share and achieved revenue and profitability targets, specializing in ORAN system deployment and optimization. My experience span with UE systems NW emulation and NW atomization, combined with a strong record of operational performance and profitability, sets me apart. **With 29 years** of experience working with high-profile technical teams, I am adept at developing systems, policies, and procedures, and transforming them into actionable steps within the organization. My key strength lies in shaping organizational culture through training and development.

ORAN platform **IOT e2e** verification
Growth Strategy & Service Delivery
Global Operational Effectiveness
Cloud vDU, vCU **Dimensioning**
Digital HW Design Engineering
Wireless Systems Engineering
Technical Roadmap Planning
Resource Planning
Inter-Group Coordination
Radio HW Design Engineering
Best Practises Implementation
Project & Delivery Management
Market Research/ Competitor Analysis

PRESENT EXECUTIVE CAREER SUMMARY

Since 2021 June – Till Date Rakuten Symphony –Senior Director of Engineering

SIGNIFICANT HIGHLIGHTS ACROSS THE TENURE

- I was hired by Rakuten to take charge of a cost-saving initiative for an Industrial-grade Cloud Server (Intel) Outdoor (IP65) Distributed Unit specifically designed for Telecom Access Networks. My primary objective is to minimize and optimize the overall infrastructure costs. Managed the program from initial proof of concept to bulk manufacturing of 26k dual variant units, successfully completing both lab and field tests. Field deployed more than 14k units. Took lead of the program and engaged with multiple OEMs, Vendors and customers to get the product right in time for field deployment. The product meets all the environmental standards & certification and satisfies the global customer requirements. Most notably, the cloud server incorporates a virtual router as a switch, thereby optimizing the end-to-end infrastructure deployment.
- In addition to managing the IP65 cloud server DU, co-managed the OpenRAN Radio Unit (ORU) 4T4R for 5G Band n77/N78. This program is run with OEMs, vendors, third-party lab testing, system integration and testing with the network. It also underwent customer lab verification and field testing prior to ordering for mass production.
- Conceptualized the new DU product upgrading to next generation 36C, IP65 server to handle 64T64R, 3-sector MIMO RRUs. Product requirement specifications formalized.

CROSS-CULTURAL / GLOBAL EXPOSURE

- Collaborated with global cross-functional teams on project management, sales and technical aspects, vendor and customer interactions, technical discussions, and reviews, while also organizing and participating in virtual debug sessions, workshops, and seminars. Also trained vendors and teams on comprehensive product functioning for various modes of operation.

PREVIOUS WORK EXPERIENCE

2017-2021- 4 years associated with Mavenir Systems - Director of Engineering

- Designed **xRAN PCIe 4G CPRI card** for DU servers and mass deployed in hundreds across globe among various telecom service providers and are meeting the customer KPIs with 99.8% accuracy which is a proven open RAN solution.
- Designed UE automation test platform for lab verification of 32 UE, 64 UE and 128 UE verification before SW MOP release for field. Mass produced for internal lab and customer lab testing thus save cost on TM500 purchases and verifying Real Time SW testing at Lab.

- Successfully designed wide band **5G RRU** covering 800MHz to 6GHz and mmWave 28GHz. Lab tested e2e for ORAN system and verified for max number of users and for 5G SA NW. Nature of work: RRU design, proto and small volume manufacturing, RRU unit testing and System integration testing. The units are successfully used for ORAN end-to-end SW validation and for “All bands”. Some of the units are used for customer lab and field verification.
 - Budget estimation, approvals and ownership for yearly programs and product development activities. Yearend reviews and planning.
 - R&D and systems lab setup responsibility, budgeting and lab upgrades for 4G and 5G technologies. Brought up the world class lab from scratch to most sophisticated infrastructure and to address multiple customer requirements and solutions at any given time.
 - Third party **CPRI/eCPRI** radios integration with Mavenir access NW solution, lab verification of different LTE RRUs both for FDD and TDD applications, testing, documenting, and releasing for customer applications. New features release testing for access RRU, DU system performance.
 - Product certifications and ensuring product meets all environmental conditions and necessary certifications satisfying the customer requirements.
- 2015-2017 associated with Asarva Chips and Technologies – Bangalore as Senior Principal Engineer**
- I have successfully owned and delivered few key programs and those include the design of FPGA emulation platforms, proto manufacturing of substrate Die, pre/post silicon validation of the mmWave ISM Band, and the tape-out of 40nm chips. I have also managed die testing after release from the manufacturer, substrate designs, wafer, and substrate packaging, along with the design of SOC test platforms and the development of engineering sample boards.
- 2013-2015 associated with Celios Software – Bangalore/Delhi as Technical Program Manager**
- In my role, my responsibilities include coordinate with vendor teams to meet set targets and objectives. Organizing meetings to align on common goals, and actively participating in technical discussions. I have been involved in 4G Macro Cell radio design reviews, radio system integration, and testing participation. My work scope extends to provide support for 4G network customer lab testing and have managed the integration and testing of RRU,DU and CU ORAN based systems. I have led a team of 30 members and have been responsible for CAPEX/OPEX budget estimations and management. I have overseen the test line setups for Macro RRU system testing end-to-end, and for system function stability. Other duties include setting up a 4G Lab, managing customer and vendor relationship, and helping as a Subject Matter Expert for access NW system planning and testing.
- 2008-2013 associated with Powerwave Technologies – Hyderabad as Principal Engineer**
- I have successfully designed and deployed Multicarrier PA (MCPA) digital hardware systems, conducted unit system testing on scales ranging in thousands, obtained product certification, field testing and customer deployment. My work scope includes architecture and design of LTE small cell system, radio hardware and leading to proto manufacturing initiatives. As a team leader of 15 members, work scope includes provided support for existing product sustenance activities, new features development and revisions, and conducted system testing. My role also includes customer support, lab setup and management for Macro and Small Cell, system integration and testing for Macro radios, as well as CAPEX/OPEX management and product certification. Furthermore, I have organized training sessions and seminars across various verticals.
- 2005-2007 associated with Ohsung Electronics Co Ltd, Gumi - South Korea d as Expert Engineer**
- **Responsibilities:** Design of ISM band RF universal remote controller and integrating with the existing IR universal remote controller, system testing and proto developments, volume manufacturing, customer support, product certification, Development of URC on new HW chipsets with enhanced features and product size optimization for power, weight and size.
- 2003-2004 associated with Secure Meters Ltd - Udaipur d as Lead Engineer**
- **Ownership:** GSM/GPRS M2m wireless module system integration with Industrial meters as remote monitoring systems and data loggers, systems testing, QA analysis and DISCOM customer demonstrations and system integration for mass deployment.
- 1999-2003 Woori Technologies Inc–South Korea as Staff Systems**
- **Responsibilities:** SCADA NW board design using Motorola Chipsets for thermal/Nuclear plant network applications, BSP porting and standalone board testing using Linux and VxWork BSP SBC packages. Team support for system integration and QA testing, proto build support.

EDUCATION

Master of Engineering in Electronics

PDA College of Engineering,
Gulbarga University,
1998

Bachelor of Engineering In
Electronics and Communication
Engineering
1993

MEMBERSHIPS/ AFFILIATIONS

AMIEETE – Hyderabad wing from 1995, Technical Seminars, Classroom sessions, technical orientation courses

ARTICLES CONTRIBUTED

I have published several technical articles focusing on LTE, mm Wave, and RF technologies. Furthermore, I have been a speaker at various seminars, sharing my expertise on RF and Radio technologies.

OVERSEAS WORK EXPERIENCE& TRAVEL

Over the course of my career, I have gained significant international experience. I've had the opportunity to work in the United States, traveling on and off for a year. I also spent four years working in South Korea. In addition, I have visited Vietnam, Taiwan, and the UK for vendor engagements and customer discussions.

Date of Birth: 21st Jan 1969 | **Languages Known:** English, Hindi, Telugu & Kannada

Address-1: 1-6-276/10, Kaladhar Colony, Musheerabad, HYDERABAD – 500020
