

SATISH SURA: Telecom & Cloud Network Systems Architect

A strategic leader with expertise in Telecom Wireless Access & Cloud Network Systems Engineering. Satish has a proven track record of delivering cost and optimization benefits to clients and operators. He brings extensive experience in conceptualizing, designing, and manufacturing high-volume access products across major international markets

Strategic Leadership & Expertise

Wireless Development

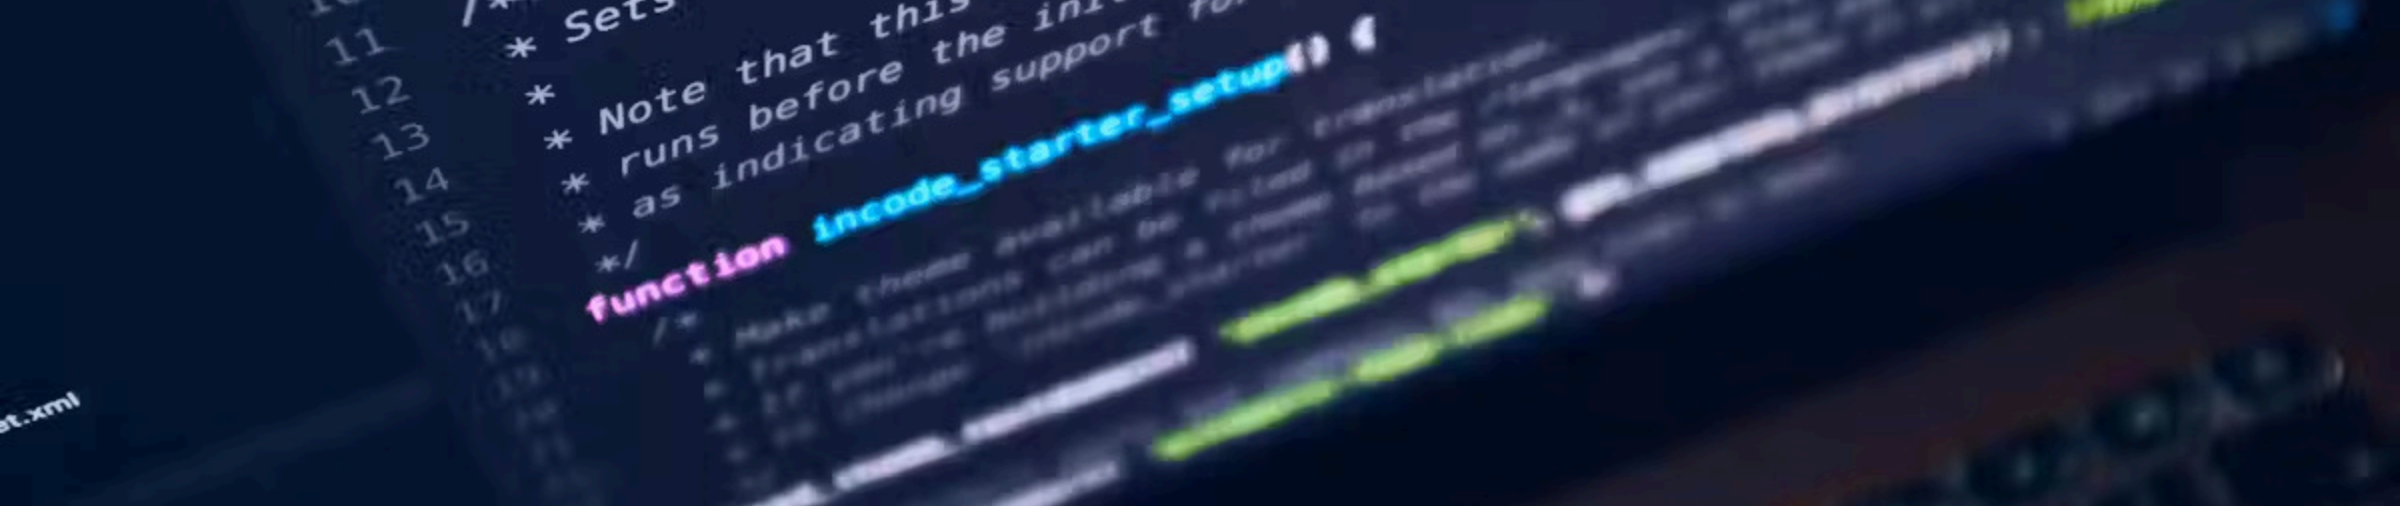

Established diverse wireless development verticals from 2G through 5G, translating business goals into technical objectives.

Relationship Management

Built and maintained relationships with customers, vendors, and OEMs, turning R&D development into large-volume production.

Budget Management

Effectively managed budget planning and ensured the successful execution of development activities within budget constraints.

Signature Skills & Innovation

1

Wireless Product Design

Competitive conceptualization and implementation of wireless product design & development, inclusive of RRU, DUs, and CU for cloud platforms.

2

ORAN Systems Architecture

Expertise in RRU FDD and TDD LTE 4G/5G ORAN systems designs, access DU, CU cloud technologies, and new NW architecture implementation.

3

Manufacturing & Deployment

Proven track record in volume manufacturing and field deployment of radios and cloud servers for DU/CU, product certifications, and lab testing.

Rakuten Symphony: Senior Director of Engineering (2021-Present)

Design & Cost Optimization

Led a cost-saving initiative for an industrial-grade cloud server (Intel) outdoor (IP65) Distributed Unit designed for Telecom Access Networks.

Mass Manufacturing

Managed the program from initial proof of concept to bulk manufacturing of 26k dual variant units, completing lab and field tests.

Field Deployment

Field deployed more than 14k units, meeting environmental standards, certifications, and global customer requirements.

Mavenir Systems: Director of Engineering (2017-2021)

Designed xRAN PCIe 4G CPRI card for DU servers, mass deployed globally, meeting customer KPIs with 99.8% accuracy.

Designed UE automation test platform for lab verification, saving costs on TM500 purchases and verifying Real Time SW testing.

Successfully designed wide band 5G RRU covering 800MHz to 6GHz and mmWave 28GHz, lab tested for ORAN system validation.

Previous Roles & Accomplishments

1

Asarva Chips and Technologies (2015-2017)

Owned and delivered key programs including FPGA emulation platforms, proto manufacturing of substrate Die, and tape-out of 40nm chips.

2

CellOS Software (2013-2015)

Coordinated with vendor teams, participated in 4G Macro Cell radio design reviews, and managed integration and testing of RRU, DU, and CU ORAN systems.

3

Powerwave Technologies (2008-2013)

Designed and deployed Multicarrier PA (MCPA) digital hardware systems, conducted unit system testing, and obtained product certification.

Education & Global Exposure

1

Master of Engineering

Electronics, PDA College of Engineering, Gulbarga University, 1998.

2

Bachelor of Engineering

Electronics and Communication Engineering, 1993.

3

Global Experience

Worked in the United States, South Korea, and visited Vietnam, Taiwan, and the UK for vendor engagements and customer discussions.

Key Takeaways & Contact Information

Satish Sura is a seasoned Telecom Wireless Access & Cloud Network Systems Architect with a proven track record of delivering cost-effective and innovative solutions. His expertise spans from wireless development and relationship management to budget planning and global collaboration.
